

Tuition that pays itself.

An AI agent that pays international tuition on time, only to the right school, never twice.

PRESENTER

Jafar Pashami

The money can't leave. The deadline doesn't move.

WHO **REZA, 48 • LAGOS** Parent, pays CAD 8–12K a term. Holds naira and USDT — not Canadian dollars.

Access

Nigeria's central bank stopped supplying FX for study abroad.

Deadlines

Miss the date: late fee, registration hold, study-permit stress.

Fraud

CAD 125K taken from 23 students in one Canadian tuition scam.

For families whose bank can't reliably send tuition abroad, Novalycs has developed TuitionPilot that results in money that leaves when a wire can't, tuition paid before the due date & the whole payment handled end to end.

Leaves when a wire can't

The alternative isn't a cheaper wire. It's no wire.

Paid before the due date

Seconds, not days. No late fee, no hold.

Handled end to end

Set the rules once. It refuses anything that doesn't match.

// THE SOLUTION

The family sets the rules once. The agent does the rest.

PROOF Family and school get the same receipt: payment ID, locked rate, fee, timestamps.

Three invoices. The agent pays one and refuses two.

PAID · COMMITTED

FALL 2026 TUITION

CAD 8,450

- All 8 rules pass
- Real payment on Bitcoin mainnet

Paid in seconds. Receipt for both sides.

REFUSED · PAYEE

"UPDATED PAYMENT DETAILS"

CAD 8,450

- Not the merchant the parent approved
- Hidden text told the agent to skip checks

Nothing signed. Family warned.

REFUSED · OVER CAP

FALL 2026 WITH EXTRA FEES

CAD 12,400

- CAD 3,400 over the term cap
- Upload it twice: still zero payments

Nothing paid. Parent decides.

REAL

Mainnet payment · 2-of-3 wallet · Claude invoice reading · rules · pay-once

MOCKED

We play the university · amounts scaled 1 : 5,000 · CAD conversion simulated

// WHY IT'S SAFE

The AI decides what the invoice says. Code decides what gets paid.

MANDATE

Rules in code, checked twice

Payee, student, currency, cap, window, autopay — re-checked before signing. The model can't override them.

IDEMPOTENCY

One payment per invoice

Order key from the invoice, claimed in the database before paying. Network error means reconcile, never resend.

PAID VS SETTLED

Committed in seconds

GoBTC co-signs, so the coins can't move elsewhere. That meets the deadline; the chain confirms later.

RATE

Locked, verified, shown

Priced in sats at request and held 30 minutes. The agent checks the amount before it signs.

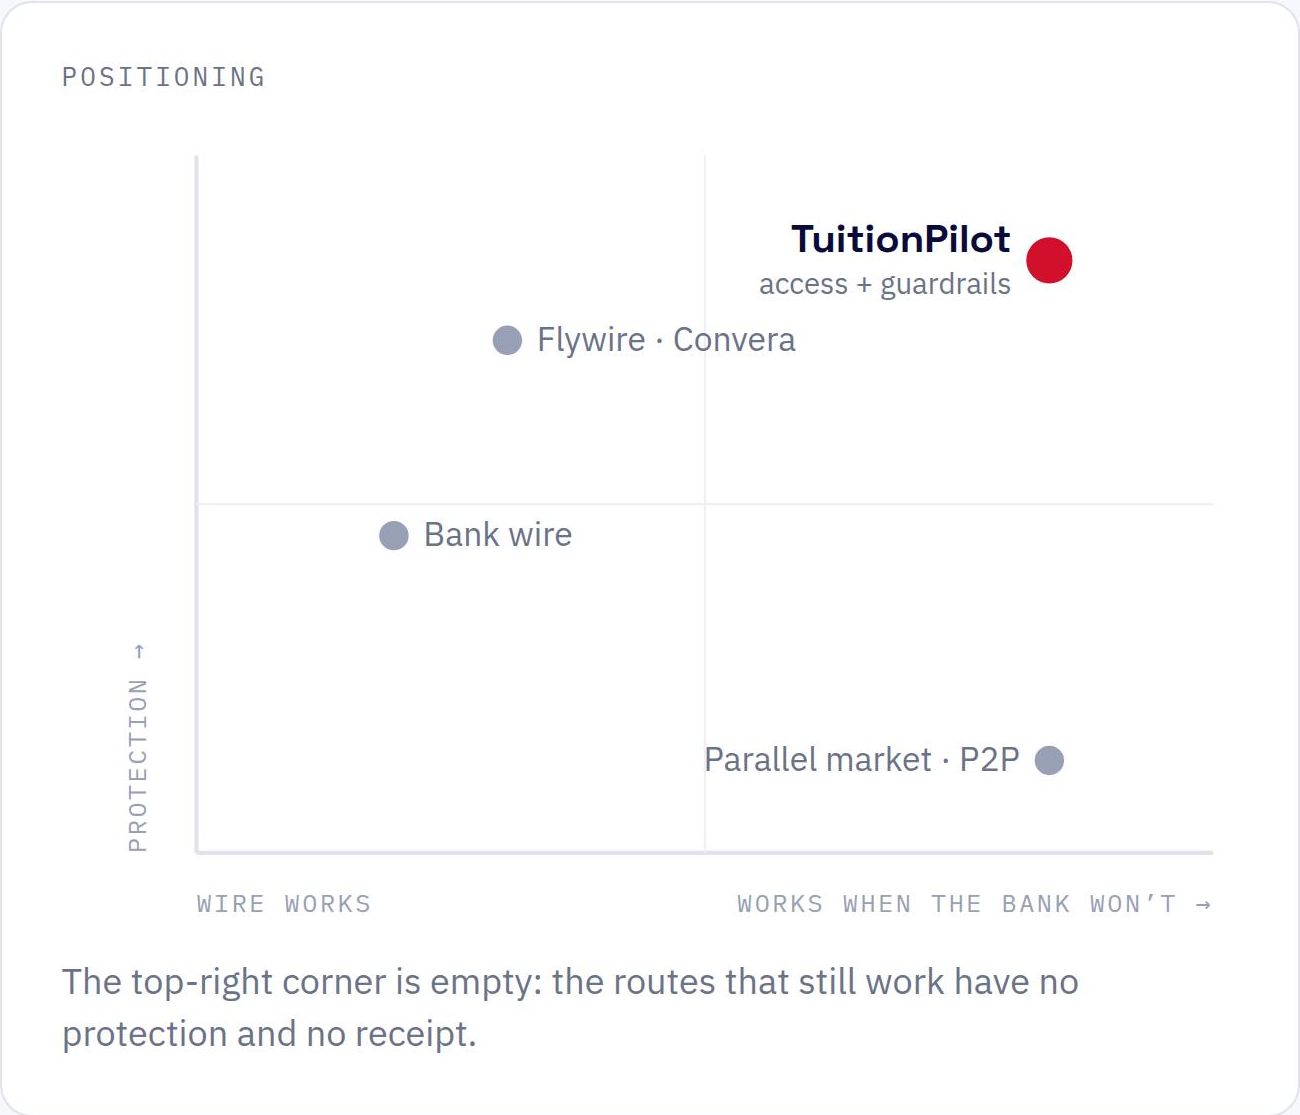

Claude tool use · GoBTC Pay instant rail (2-of-3 P2WSH) · local signing · Next.js · SQLite audit trail

Everyone else competes on price. We compete where the money can't move.

HOW FAMILIES PAY TODAY	COST	TIME
Bank wire DIRECT	25-50 + 2-4%	1-5 days
Flywire DIRECT	≈ 2-3%	1-3 days
Convera DIRECT	≈ 1.5-2%	1-3 days
Parallel market, P2P crypto INDIRECT - WHEN THE WIRE FAILS	5-15%	hours-days
TuitionPilot ACCESS + GUARDRAILS	≈ 1.5-4.5%	seconds

Our competition isn't Flywire. It's the parallel market a family uses when the bank says no.

Flywire/Convera margins · Canadian exchange fee tables · 2025-2026

CAD 25 billion of tuition crosses a border into Canada every year.

TAM

TOTAL ADDRESSABLE

CAD 25B / yr 691,215 study-permit holders × ≈ CAD 36,400 fees.

SAM

SERVED AVAILABLE

CAD 1.0B / yr

Nigeria → Canada: ≈ 26,500 permits, 3rd-largest source, documented FX rationing.

TM

YEAR-ONE TARGET

1,000 families

≈ CAD 20M paid · ≈ CAD 200K at a 1% fee.

Canada's permit cap cut student numbers 26% in 2025. Every school is now fighting for the students who *can* pay.

IRCC study-permit holders, 31 Dec 2025 · Statistics Canada 2025/26 tuition · year-one target is our assumption, not a forecast

Built and paying today. One corridor next.

NOW • VALIDATED

It works, on mainnet

- Real Bitcoin payment, end to end
- Fraud and over-cap invoices refused
- Zero duplicate payments

NEXT 6 MONTHS

Nigeria → Canada, for real

- Off-ramp partner pays the school in CAD
- Stablecoin rail — what families hold
- FINTRAC registration, or a licensed partner

CHANNEL

Where the pain is known

- Education agents — they own the relationship
- University international offices
- Diaspora communities in the corridor

One builder. The agent, the payment rail and the compliance work.

Jafar Pashami

FOUNDER · NOVALYCS

Built all of TuitionPilot for this hackathon: the Claude agent, the Bitcoin signing path, the rule engine, and the FINTRAC and PIPEDA onboarding most demos skip.

Payments engineering

AI agents

Bitcoin / multisig

Compliance by design

Shipped, not slides

A real mainnet payment, an audit trail for every agent decision, and an honest list of what is still mocked.

Hiring next

A compliance lead for FINTRAC, and a corridor partner in Lagos.

// THE ASK

Four things, and a real family pays tuition this year.

CONNECTIONS

An off-ramp partner

Takes stablecoins, pays a Canadian bursar in CAD.

PILOT

One university office

Pin its bursar details, take ten real payments.

MENTORSHIP

FINTRAC guidance

Register, or launch under a licensed partner.

SIGN-UPS

10 families in Lagos

Paying Canadian tuition this term.

Families set the rules. TuitionPilot makes sure the school gets paid — once, on time, to the right account.

// THANK YOU
